The rhythms I used in this composition are all derived from the Fibonacci sequence: 1 1 2 3 5 8 13 21 34... Each musical phrase is composed with a melody and a rest. The relation between the length of this two elements, melody and rest, is strictly derived from the Fibonacci sequence. The lengths are measured in eight notes/rests or quarter notes/rests. The number of the length of the rest and the number of the length of the melody are always two following numbers of the Fibonacci sequence. The bigger number defines the length of the melody, the smaller number defines the length of the rest. For example: If the melody is 5 quarter long, the following rest has to be 3 quarter long. Because in the sequence after 3 comes 5. Or, if the melody is 34 eights long, the following rest has to be 21 eights long. Because after the number 21 comes 34. If the melody is 13 eights long, the rest has to be 8 eights long. And so on...

On the following are shown all different rhythms used in this composition.

The relation from the fibonacci sequence to the golden ratio:

The bigger the numbers in the sequence the closer the relation to the golden ratio from two consecutive numbers:

Sequence: 1 1 2 3 5 8 13 21 34... Golden Ratio: 1.618 =>

This was the initial idea of this composition:

To write musical phrases which are as close as possible to the golden ratio.

$$\begin{array}{ll} 1 / 1 = 1.000 & 8 / 5 = 1.600 \\ 2 / 1 = 2.000 & 13 / 8 = 1.625 \\ 3 / 2 = 1.500 & 21 / 13 = 1.615 \\ 5 / 3 = 1.667 & 34 / 21 = 1.619 \end{array}$$
